

Selected Income and Tax Items from Inflation-Indexed Individual Tax Returns, 1990-2001

Data Release

This data release looks at numbers of returns, adjusted gross income (AGI), and other selected items in constant 1990 dollars—that is adjusted for inflation—by AGI classes for each of the years from 1990 through 2001. The purpose of this data release is to make individual income tax data available by inflation-adjusted income classes for the first time. The data are presented by eleven income classes, including income classes of \$10 million or more (which had previously been published only for Tax Years 2000 and 2001). For Tax Year 2001, 130.3 million returns were filed, a 14.5-percent increase from the 113.7 million returns filed for 1990 (Figure A). This growth in the number of returns has not been uniform among the various income classes. For example, while the number of returns with real AGI between \$1 under \$20,000 increased 9.0 percent and the number with AGI between \$20,000 and \$50,000 increased 11.3 percent, the number of returns for all groups above \$100,000 increased by at least 69 percent. There are five other figures to summarize changes over this time period by income class for some of the major individual income items: salaries and wages and business income (Figure B);

taxable interest and dividends (Figure C); sale of capital assets net gain and partnership and S corporation income (Figure D); and taxable pensions and annuities and taxable Social Security benefits (Figure E). Figure F shows itemized deductions total and income tax. The conversion to 1990 dollars was performed using the Consumer Price Index for Urban Consumers (CPI-U) as published by the Bureau of Labor Statistics of the U.S. Department of Labor. The CPI-U levels used are: 100.0, 1990; 104.2, 1991; 107.3, 1992; 110.6, 1993; 113.4, 1994; 116.6, 1995; 120.0, 1996; 122.8, 1997; 125.4, 1998; 127.5, 1999; 131.8, 2000; and 135.5, 2001.

The figures in this article were derived from two sets of tables (1a-1l and 2a-2l). These tables contain sources of income, adjustments, tax items, tax liability, tax credits, and tax payments for individual income tax returns in constant 1990 dollars by size of real adjusted gross income for Tax Years 1990-2001. They can be found on the “Tax Stats” portion of the Internal Revenue Service’s website at <http://www.irs.gov/taxstats/article/0,,id=117514,00.html>. Select Spring 2004, and click on the Excel tables associated with this data release.
